

thermometers with electric contacts

all stainless steel construction

DS 4" (100 mm)

CE Compliance to requirements of
BT 2014/35/EU

These instruments are used to monitor the electrical activity of compressors, pumps, presses, hydraulic and pneumatic equipment, chemical and petrochemical plants. Contacts open or close the circuit according to the pointer position and they are adjustable over the whole range. Vibrations and pulsations effects on the instrument are drastically reduced by the liquid filling as well as those caused by a corrosive atmosphere making the gauge and the electric contacts longlasting and perform better. Also available with intrinsically safe inductive contacts.

(1) Instruments accuracy may be affected by extra electric mechanical contacts, if added: 1% accuracy turns to be 1,5%, 1,6% turns to be 2,4% etc. (add 50% of the instrument accuracy; in case of magnetically assisted type contact, this value can't be added within $\pm 5\%$ of setting point).
